

# **The Miracle of Ozone Therapy**

**By Louise Mclean**

**1<sup>st</sup> June 2009**

Ozone is probably one of the most miraculous healing therapies available on our planet at this time. Through its oxygenating power, it successfully treats and cures a wide range of serious degenerative conditions including cancer, cardio-vascular disease, diabetes, liver and kidney disease. Ozone is very potent electrified or energised oxygen (O<sub>3</sub>). Oxygen is more essential to life than food and water. Without it we would die in minutes but in big cities the levels in the air are decreasing, causing widespread ill health. Oxygen is carried to every part of the body by the red blood cells and is essential for the functioning of every cell in the body, as well as stimulating a healthy immune system.

Ozone therapy has been in use since the 1800s and in 1896 the genius Nikola Tesla patented the first ozone generator in the US, later forming the 'Tesla Ozone Company'. After that the Institute for Oxygen Therapy-Healing was formed in Berlin and the man credited with founding naturopathy, Dr. Benedict Lust, began practising in New York, writing many articles on ozone.

Since the 1940s, ozone machines in the USA have been seized and information has been effectively suppressed by the Federal Drug Agency, citing the excuse that there is no 'scientific evidence' for their effectiveness. Despite 60 years of medical ozone's use on humans by thousands of physicians and flawless animal studies, the FDA won't allow human testing in the U.S. In fact ozone use predates the formation of the FDA itself. Ed McCabe, ('Mister Oxygen') stated that 'ozone's medical usage is grandfathered in the United States and held as perfectly legal for any MD to use without censure.'

During a US Senate hearing in 1965, Dr. Herbert Ley, FDA Commissioner, testified that the FDA "protects" the big drug companies and are subsequently rewarded. Using the government's police powers they attack those who threaten pharmaceutical profits.

Ozone forms a protective layer around the earth and scientists point to the danger of high ozone readings causing respiratory problems, so many are prejudiced, dismissive and refuse to look into it.

This form of treatment is highly popular in Germany and in 1959, an ozone machine called Ozonosan was patented by Dr. Joachim Hansler which formed the basis of the expansion in German ozone therapy. Since then more than 10,000 medical doctors there have been using it and Dr. Hansler's daughter continues to run the company manufacturing the generators.

Despite more than 10 million people being successfully treated with ozone in Germany for the last 60 years, this is still considered to be 'anecdotal evidence'! Many a sceptical doctor has been forced to change his stance while examining its success.

In fact the rate of success in Germany has been measured at 90% with the lowest side effects of any medical treatment. One doctor cited only 3 out of 10,000 cases ever having any kind of allergic reaction, which quickly disappeared when adjusting the dosage. Many people travel from North America to Germany and pay \$3000 for 6 treatments because it had been difficult for them to find a practitioner in the US. Nowadays, there are some doctors and naturopaths in the US who give a course of treatments as well as a few clinics in Mexico.

Ozone therapy has also been practised in Russia for 40 years in their hospitals. Prof. Sergey P. Peretyagin, President of the Russian Association of Ozone Therapy has been using it for 30 years. Doctors there report no reoccurrence of the diseases after treatment. In Cuba, ozone therapy has been approved by the Ministry of Health since 1986 and hundreds of thousands of people have been treated free in every hospital. There are International Ozone Associations which meet for conferences every year in different cities. Hundred of medical papers have been published

Yet in the US it has been largely ignored and called medical fraud as well as discredited in the media. The FDA still states on its website that it has no effect, even though studies on AIDS have shown that ozone inactivates HIV.

The Canadian government tried to conduct trials and in the 1980s a company called Medizone International filed its research with the FDA but it was dismissed as anecdotal evidence. They wanted to make human plasma safer for blood transfusions by eliminating infectious agents but the application was rejected.

Many dentists are now using it to prevent decay or infection during dental operations and it is used during heart surgery to reduce the need for risky blood transfusions. In many parts of the world the public drinking water is ozonated to clear it of harmful bacteria.

The National Institute of Health, with a budget of nearly \$30 billion has been around for 100 years but has not done studies on ozone. PubMed which publishes trials has 5015 references on ozone showing 95% improvement with studies on its usage for AIDS and tuberculosis.

The late Robert Atkins used ozone generators and treated patients with AIDS, cancer and yeast infections. He found the generators 'useful, extremely safe' and they 'shrink tumours, enhance the immune system.' The FDA stopped him using the machines. He said: 'My patients need ozone.'

Ozone stimulates cytokine production, attacking cancer cells. Double Nobel Prize winner biochemist, Otto Warburg, in his book 'The Prime Cause and Prevention of Cancer', wrote about the precondition of the cancerous state where there is a lack of oxygen at the cellular level. He found that the presence of increased amounts of oxygen inhibits the spread of cancer cells and will eventually cause them to die. Ozone treatment will inhibit and repair cancer cells without damaging healthy cells.

Some of the conditions recorded as being successfully treated with ozone include the following: abscess, acne, AIDS, allergies, anal fissure, cancer, cerebral sclerosis, circulatory disturbances, cirrhosis of the liver, menopausal problems, constipation, cystitis, dermatology, fistulae, fungi, furunculosis, gangrene, gastroenterology, hepatitis, herpes, high cholesterol, colitis, neurology, tumors, orthopedics, osteomyelitis, Parkinson's, rheumatism, gynaecological conditions, Raynaud's disease, scars, inflammation of the vertebrae, stomatitis, joint dystrophy, phlebitis, open sores, urology, vascular surgery, wound healing. The list is endless.

Ozone treatment comes in many forms including direct intravenous infusion into a vein, as well as rectal and vaginal insufflation, inhalation, ozone sauna and ozonated water. There is one place where patients can go for a three week holiday while getting intensive, effective and safe treatment and that is the Sante Caribe Wellness Center on the island of St. Kitts/Nevis in the Carribean. There they specialise in all of the above ozone treatments as well as a wide range of holistic therapies including chelation, liver detoxification, nutrition, immunotherapy, enzymatic therapy, live blood analysis and hair mineral analysis. There is also delicious organic food, massage and very comfortable accommodation in a beautiful setting.

For a full history of Ozone Therapy read this article by 'Mister Oxygen', Ed McCabe.
