The prince has to choose

October 31 2008 Dick Taverne

Prince Charles is a man of passionate convictions who expresses his views publicly, assiduously and provocatively. For instance, he believes he has a mission to save the world from GM crops, which he described in his recent Sir Albert Howard Memorial lecture as "a gigantic experiment with nature and the whole of humanity which has gone seriously wrong". He tells us that only organic crops are truly sustainable. He has also urged the government to promote alternative medicine and homeopathy in particular. In fact we must go Back to Nature, because he trusts Mother Earth to see to it "that plants and animals are left to protect themselves against disease". Science is clearly out of control, and he questions its contribution to modern medicine as well as agriculture.

Cancer - A Cautionary Tale

by Phillip Day

I have studied cancer for 25 years. I've given countless lectures on the subject, written books, made films, spoken to some of the most successful cancer doctors in the business..."Cancer is a \$200 billion-a-year industry. There are more people today making a living out of cancer than are dying from it." *From an economic point of view alone,* one professor confided, *"why would anyone ever wish to cure cancer? Millions would have to re-train."* <http://campaignfortruth.com/Eclub/180208/CTM-cancercautionarytale.htm>
